# Cable seals
1234567 **Safelock M**
1234567 **Alulock**

How to seal

01 Pass the cable through the compartment you plan to seal and insert it into the capsule A to activate the locking mechanism.

"A"

**02** Pull the cable tight to the tightest aperture possible.

⚠ **ATENTION!**

AVOID LOOSE SEALINGS!

03 Confirm the seal is locked by gently pulling as shown in the figure.

If the seal is not locked, replace it.

How to remove

Use a pair of pliers to cut the seal open.

04 Cut the excess cable right next to the capsule. The cable will fray, making it impossible to be re-inserted.
